1. A method of measuring an intrinsic resistance of a battery comprising the steps of:

measuring periodically a discharge current and a terminal voltage responding to the discharge current at a low rate discharge of the battery;

determining a first approximate expression of the terminal voltage with respect to the increasing discharge current and a second approximate expression of the terminal voltage with respect to the decreasing discharge current based on the measured discharge current and terminal voltage;

defining a range of the intrinsic resistance based on the first and second approximate expressions;

assuming a resistance in the range of the intrinsic resistance as a tentative intrinsic resistance;

determining a tentative maximum polarization time from the second approximate expression and the tentative intrinsic resistance; and

determining the intrinsic resistance from two relational expressions including the intrinsic resistance, an intrinsic maximum polarization time and the tentative maximum polarization time.

- 2. The method as claimed in claim 1, wherein said two relational expressions comprise:
  - a first relational expression given by equating the

intrinsic resistance to a formula of { (a period of time between a start of discharge and the intrinsic maximum polarization time) / (a period of time between the start of discharge and the tentative maximum polarization time) } X (a maximum value in the range of the intrinsic resistance) + { (a period of time between the intrinsic maximum polarization time and the tentative maximum polarization time) / (the period of time between the start of discharge and the tentative maximum polarization time) } X (a minimum value in the range of the intrinsic resistance); and

a second relational expression given by equating the intrinsic resistance to a formula of a differential equation of the second approximate expression substituted the discharge current with a current of a formula of (a peak current) ×{ (the period of time between the intrinsic and tentative maximum polarization times) / (a period of time between a peak current time and the tentative maximum polarization time).

3. The method as claimed in claim 1 or 2, further comprising the steps of:

differentiating the first approximate expression with respect to the discharge current to obtain a first amount of change;

differentiating the second approximate expression with respect to the discharge current to obtain a second amount of change; and

defining the range of the intrinsic resistance between (the first amount of change + the second amount of change) /2 and (the second amount of change) at the peak current.

- 5 4. The method as claimed in any one of claims 1-3, wherein the center value of the range of the intrinsic resistance is the tentative intrinsic resistance.
- 5. An apparatus for measuring an intrinsic resistance of abattery comprising:
  - a current sensor for measuring a discharge current of a battery at a low rate discharge;
  - a voltage sensor for measuring a terminal voltage of the battery responding to the discharge current;
- an interface circuit for converting the measured voltage from analog to digital; and
  - a microcomputer having a CPU, a RAM and a ROM,

wherein the CPU

25

receives data of the measured current and voltage from the interface circuit;

calculates a first approximate expression of the terminal voltage with respect to the increasing discharge current and a second approximate expression of the terminal voltage with respect to the decreasing discharge current from the measured discharge current and terminal voltage;

defines a range of the intrinsic resistance from the first

and second approximate expressions;

assumes a resistance in the range of the intrinsic resistance as a tentative intrinsic resistance;

determines a tentative maximum polarization time from the second expression and the tentative intrinsic resistance; and

determines the intrinsic resistance from two relational expressions including the intrinsic resistance, an intrinsic maximum polarization time and the tentative maximum polarization time.
